

# Datasheet TeleController TC401

## ► Introduction

This is the most powerful TeleController of a series of Remote Terminal Units (RTU) that Inter Act has developed for telemetry over internet. Out of the four different TeleControllers available, the TC401 provides the best connectivity, mass storage capacity, and high processor power. Therefore the TC401 is best suitable for larger and more complex processes.

It can be used stand alone, or it can be connected to a private and secured domain in TeleControlNet. TeleControlNet is a Software as a Service (SaaS) for WEBscada and WEBmes applications.

## ► Main functions

The TC401 enables controlling and monitoring of remote processes and machines. This TeleController is the gateway between the local process controller (e.g. PLC) and the internet or TeleControlNet. The TC401 can communicate real time with virtually any existing process controller. This connection does not require any change of the existing software on the local process controller. The connection with TeleControlNet can be realized via a mobile 3G APN Network or DSL.

The TC401 performs three major tasks:

- It locally stores process data.
- It receives remote user controls to be submitted to the local process controller.
- It sends process alarms in real time to TeleControlNet.

## ► Main features

- Single board PC for 35 mm DIN rail mounting, including internal 3G modem.
- Applicable in PLC control systems as HMI (WEBscada) terminal.
- Can also be supplied without WEBscada software.

## ► Processor

### **Intel® Atom™ processor**

The Intel® Atom™ D525 processor supports one channel of 667 MHz DDR2 SDRAM up to 4 GB. The chipset features power-efficient graphics with an integrated 18-bit 3D graphics engine based on the Intel® Graphics Media Accelerator (GMA) 3150 architecture with a VGA display port. The Direct Media Interface (DMI) is designed into the Pineview-D D525 processor to provide an efficient high-bandwidth communication channel between the processor and the ICH8M.

## Embedded Intel® ICH8M

The board integrates the Intel® ICH8M. It provides I/O capabilities and flexibility via high-bandwidth interfaces such as CF, ethernet, Mini PCI, Mini PCIe, Serial ATA and USB 2.0.
